### Configuration Update Eldon Server Racks, ESR

In order to be more flexible in the market, Eldon has upgraded the configuration of the Eldon Server Rack ranges, ESR.

The present configuration is equipped with a rear panel (not a door) and a re-tractable plinth as you can see in the picture on the right. Together with a mounted roof, side panels and front door the configuration is complete.

Old situation

rear

New situation

However, customer feedback tells us that you would prefer the following configuration instead:

The rear panel will be changed for a rear door and the re-tractable plinth will be offered as an accessory.

Remember, the Eldon doors offer you an amazing cross-flow of 80.3%, and therefore the opportunity to mount more servers without causing a problem with heat dissipation.

The ESR range continues to provide a flexible working solution, but with added benefits to the user. All configuration options and accessories of the EIRack® range can be mounted in combination with Server Racks, with up to 900kg mounted inside.

These changes become affective from 15<sup>th</sup> of September 2007
