

DRB, Drawing pocket

Modular building is becoming more and more the standard for electrical enclosures. Different solutions are built from standard items via the exchange of modules. Eldon has embraced the modular concept in its enclosures from the beginning.

The drawing pocket is an item that is needed in many applications to have manuals, drawings and technical information at hand.

The new drawing pocket DRB0303 fits to all MultiFlex doors from 600mm to 1600mm wide. One product fits all. Also the width is made to fit standard filing folders to keep all information organized.

The DRB0303 drawing pocket will replace the existing range of DRB drawing pockets.

The DRB500, DRB600, DRB700, DRB800 and DRB1000 will be taken out of the range. Deliveries will commence while stock lasts.

The DRB0303 is available from stock. (For parts in RAL7035 please add "R5" to the standard article number)

Material: 1,5 mm painted steel
Colour: RAL7032
Usable depth: 68mm
