

New MultiFlex® bracket: VBK04

Num: Eldon_0705_006_VBK04

New product VBK04 for increased flexibility in MultiFlex

L.S.,

Eldon MultiFlex enclosures are among the most versatile in the marketplace today when it comes to building solutions for the industrial end-user. Combining different control options and even building in the actual controlled hardware makes it necessary to be able to separate one section from another. Partial doors and panels provide easy access to these compartments. It is often more economical to build it all in one enclosure while dividing the enclosure front and internal space in several sections.

The new bracket VBK04 makes an easy combination of front and internal sectioning possible by combining the CDV to divide the front and the VBD and VB to divide the internal space. With these parts complete enclosure sections are made while having the benefit of the economics of only one enclosure.

Art no: **VBK04**

Description: Mounting brackets for combining the CDV with the VBD for complete compartment installations or when only making a separation in depth. VBK04 is only needed in 1000 and 1200 mm wide enclosures.

Material: 2mm zinc plated steel

Pack quantity: 4 including mounting material

This item is available from stock.
